1 Introduction

In today's business world, email is a mission critical application. Email is so crucial to every modern company that downtime or lost emails causes loss of productivity and or business. With this in mind, we have developed the "Microsoft Exchange Mail Level Backup Agent" to complement our existing "Exchange Backup Agent" to provide full exchange server protection with the unique ability to quickly recover lost information without restoring the whole exchange information store.

Our mail level (brick level) backup was not designed to fully protect an Exchange server, but to facilitate easy backup and fast restore of individual mailboxes. Our mail level restore cannot be used to fully recover the Information Store after a disaster. If used, a mail level backup must be utilized in conjunction with full Information Store Backup, in order to fully protect the exchange server.

2 How To - Backup Individual Emails

2.1 Granting Full Mailbox Access Privileges

"MS Exchange Mail Level Backup" requires "Full Mailbox Access" permission for the user running OBM on the exchange machine. Please follow one of the instructions below to grant the required access.

2.1.1 For one specific mailbox

Use the following procedure to grant access to Exchange 2000 or an Exchange 2003 mailbox:

- a) Start Active Directory Users and Computers.
- b) On the View menu, ensure that the Advanced Features check box is selected.
- c) Right-click the user whose mailbox you want to give permissions to and choose Properties.
- d) On the Exchange Advanced tab, click Mailbox Rights.
- e) Notice that the Domain Admins and Enterprise Admins have both been given Deny access to Full Mailbox access.

- f) Click Add, click the user or group who you want to have access to this mailbox, and then click OK.
- g) Be sure that the user or group is selected in the Name box.
- h) In the Permissions list, click Allow next to Full Mailbox Access, and then click OK.
- i) Click Ok all the way out.
- j) Restart the Microsoft Exchange Information Store.

2.1.2 For mailboxes located within a specific mailbox store

Use the following procedure to grant access to Exchange 2000 or an Exchange 2003 mailbox found on a specific mailbox store:

- a) Start Exchange System Manager.
- b) Drill down to your server object within the appropriate Administrative Group. Expand the server object and find the required mailbox store within the appropriate Storage Group. Right-click it and choose Properties.
- c) In the Properties window go to the Security tab.
- d) Click Add, click the user or group who you want to have access to the mailboxes, and then click OK.
- e) Be sure that the user or group is selected in the Name box.
- f) In the Permissions list, click Allow next to Full Control, and then click OK.
- g) Click 'Apply' and 'OK'
- h) Restart the Microsoft Exchange Information Store.

2.1.3 For mailboxes located within a specific server

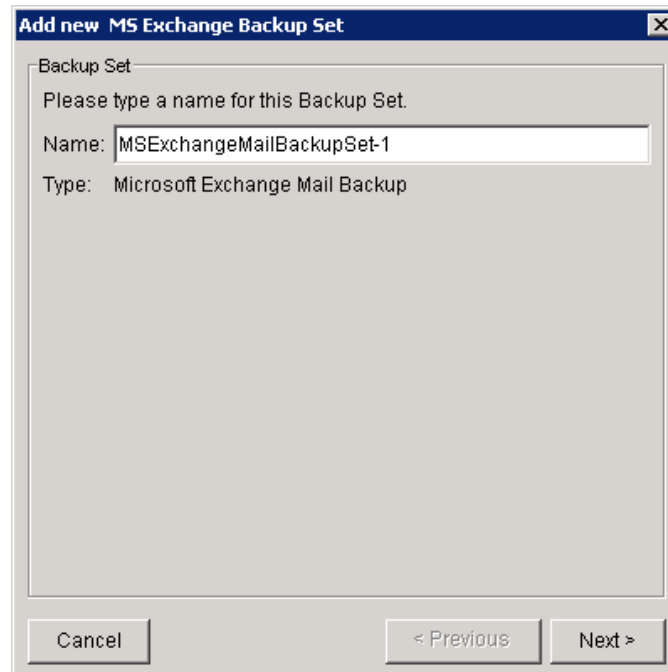

- a) Start Exchange System Manager.
- b) Drill down to your server object within the appropriate Administrative Group. Right-click it and choose Properties.
- c) In the Properties window go to the Security tab.
- d) Click Add, click the user or group who you want to have access to the mailboxes, and then click OK.
- e) Be sure that the user or group is selected in the Name box.
- f) In the Permissions list, click Allow next to Full Control, and then click OK.
- g) Click Ok all the way out.
- h) Restart the Microsoft Exchange Information Store.

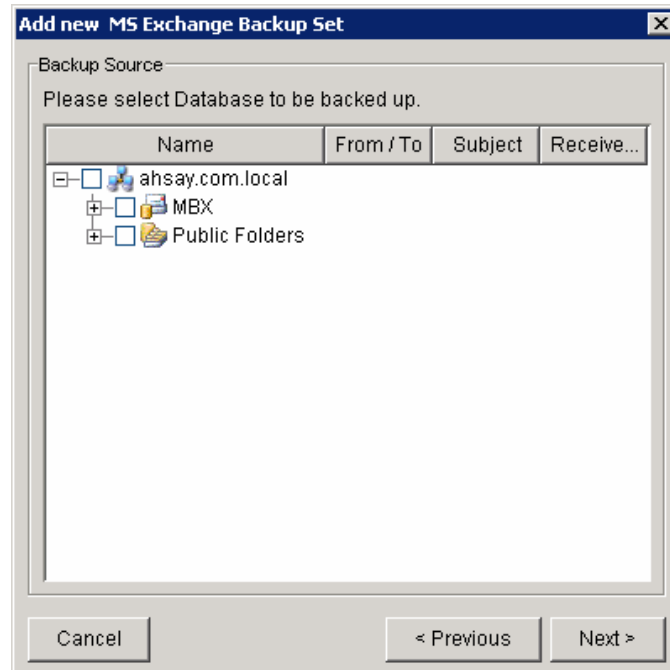

2.2 Creating a MS Exchange Mail Backup Set

A MS Exchange Mail Backup Set can be created as follows:-

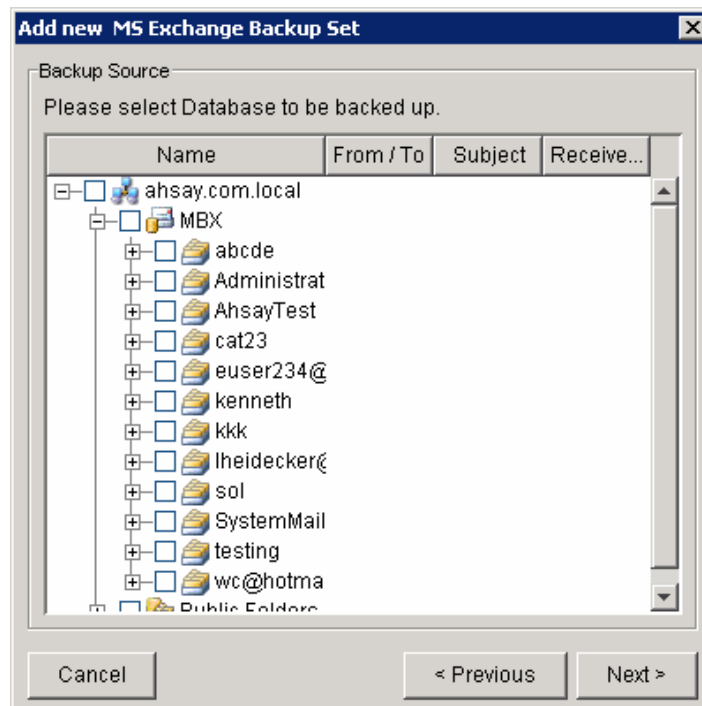

- a) Select Backup Set > New > MS Exchange Mail Backup Set. Change the name as appropriate and click [Next] button.

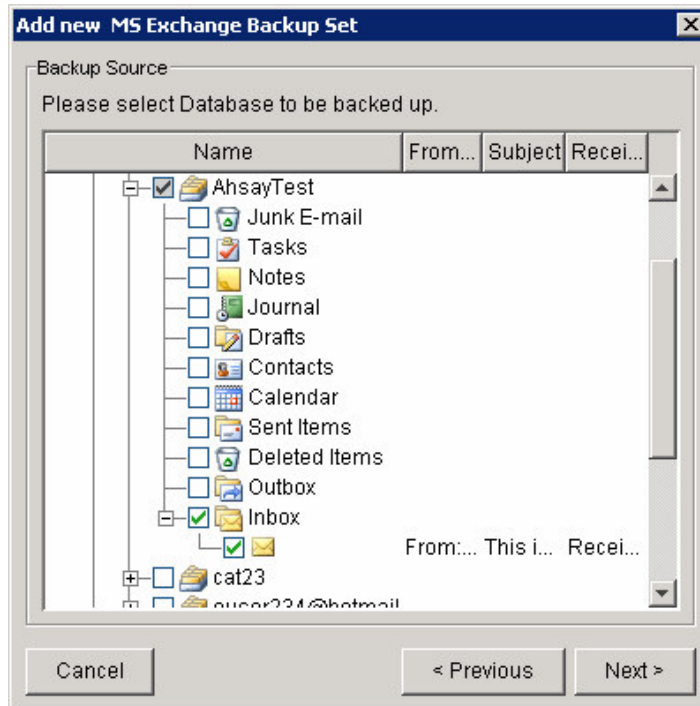

- b) Notice that the root node is the exchange server address (in this case yourcompany.com.local). Below the root node is the “MBX” and “Public Folders” nodes.

- c) Expand the “MBX” node to display the list of Email Accounts for this exchange server.

- d) Choose a mailbox, for example expand the “YourcompanyTest” mailbox to display all the folders available under this mailbox.

- e) Choose some emails to backup. For example, check the “Inbox” folder to backup each email inside the inbox. Click [next] and follow on screen instructions to finish creating a “MS Exchange Mail Backup Set”.

The screenshot shows the Ahsay Online Backup Manager interface. The main window is titled "Ahsay Online Backup Manager" and has a menu bar with "Backup Set", "Backup", "Restore", "Tools", "View", and "Help". Below the menu bar are buttons for "Save Setting", "Start Backup", and "Stop Backup".

The interface is divided into several sections:

- Backup Controller:** A tree view on the left showing the configuration structure for "MSExchangeMailBackupSet-1", including "Backup Source", "Backup Schedule", "Command Line Tool", "Setting", "Encryption", "Retention Policy", "Extra Backup", and "Local Copy".
- Backup Source (MSExchangeMailBackupSet-1):** A tree view on the right showing the hierarchy of the backup source. It includes "ahsay.com.local" and "euser234@hotmail.com". Under "ahsay.com.local", there is an "MBX" folder containing various mail folders: "abcde", "Administrator", "AhsayTest", "Junk E-mail", "Tasks", "Notes", "Journal", "Drafts", "Contacts", "Calendar", "Sent Items", "Deleted Items", "Outbox", and "Inbox".
- Log Table (MSExchangeMailBackupSet-1):** A table at the bottom right with columns for "Type", "Log", and "Time".

At the bottom of the window, there are buttons for "Backup", "Restore", and "Log". The status bar at the very bottom displays "Welcome to Ahsay Online Backup Manager", "Quota (Remaining / Total): 49.99G / 50G", and "Last Backup: 2006-05-18 15:16".

2.3 Backup Emails

After the backup set is created, the selected emails can be backed up by running the backup set straight away or wait for the scheduler to start. For example, the email within the inbox from the backup set created above was backed up by running the [Start Backup] command.

The screenshot shows the Ahsay Online Backup Manager interface. The main window displays a log table for a backup operation. The log table has three columns: Type, Log, and Time. The log entries show the progression of the backup, from starting the backup to uploading the data and completing successfully. The status bar at the bottom indicates that the backup was completed successfully and shows the remaining quota and the last backup time.

Type	Log	Time
	Start [Windows 2003 (win2003sbs), AhsayOBM 5.1.0.5p]	[2006/05/25 11:31:09]
	Start running pre-commands	[2006/05/25 11:31:09]
	Finished running pre-commands	[2006/05/25 11:31:09]
	Reading backup source from hard disk...	[2006/05/25 11:31:11]

	[New Directory] Uploading "ahsay.com.local/MBX/AhsayTest/Inbox"	[2006/05/25 11:31:18]
	[New Mail] Uploading 100% of "ahsay.com.local/MBX/AhsayTest/Inbox/This is a test email message.EML"	[2006/05/25 11:31:18]
	Start running post-commands	[2006/05/25 11:31:19]
	Finished running post-commands	[2006/05/25 11:31:19]
	Backup Completed Successfully	[2006/05/25 11:31:20]

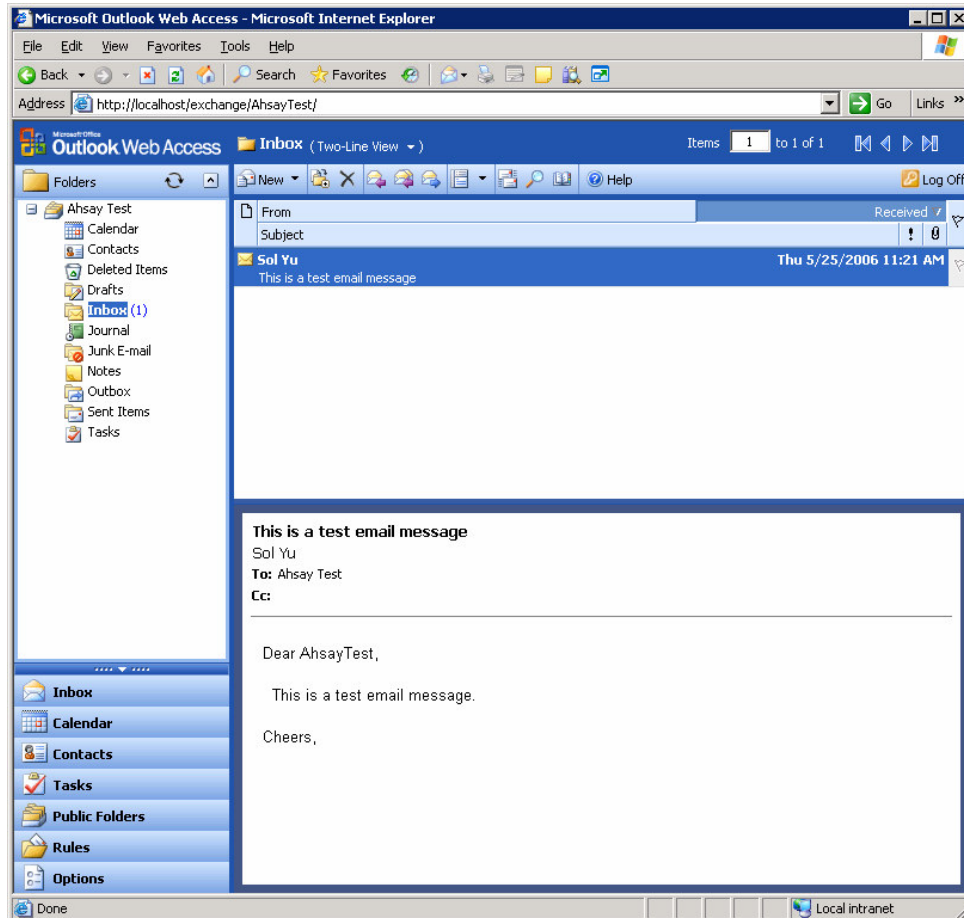

Backup Completed Successfully Quota (Remaining / Total): 49.99G / 50G Last Backup: 2006-05-18 15:16

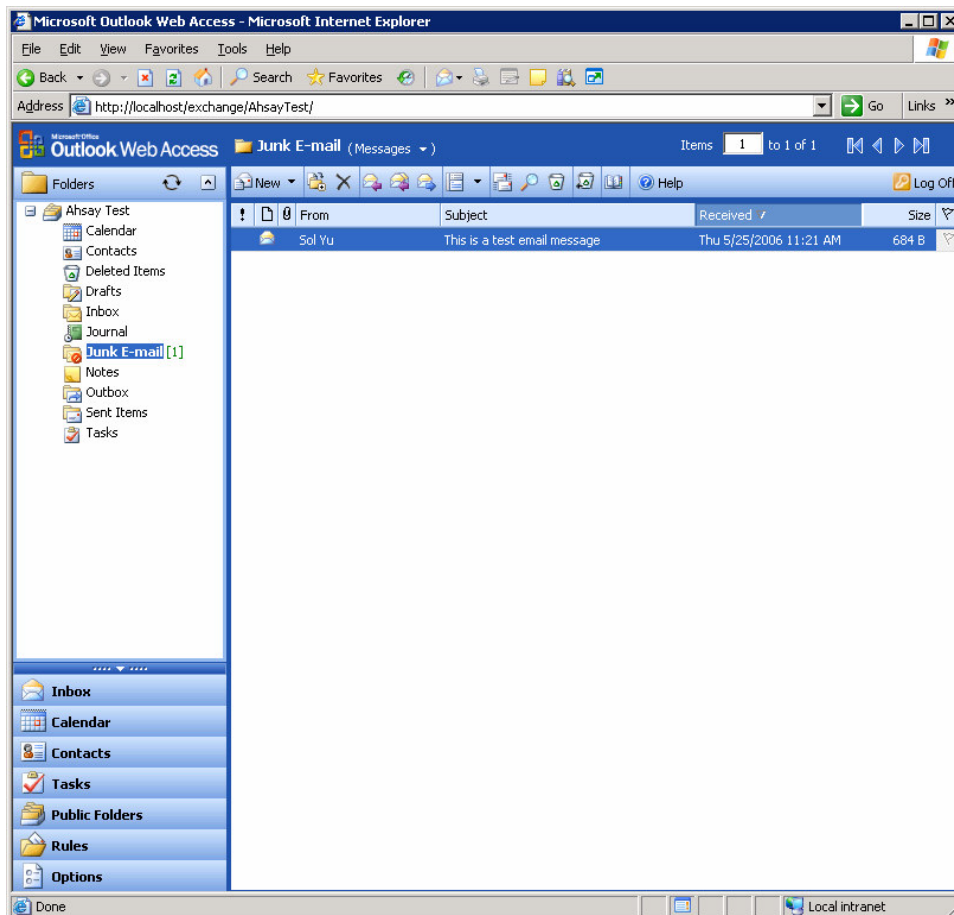

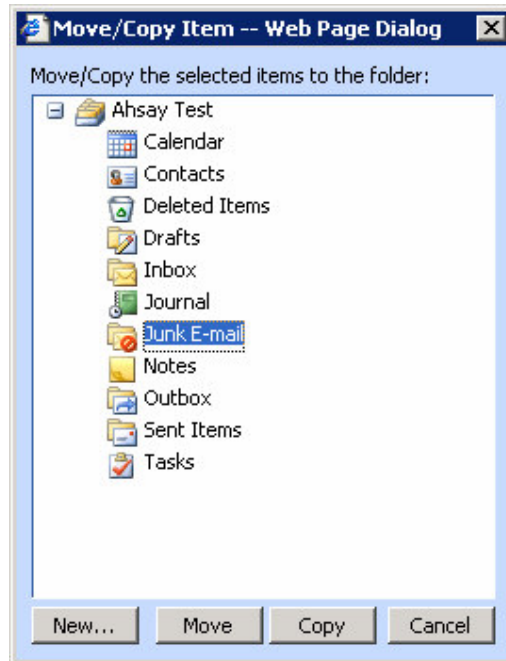

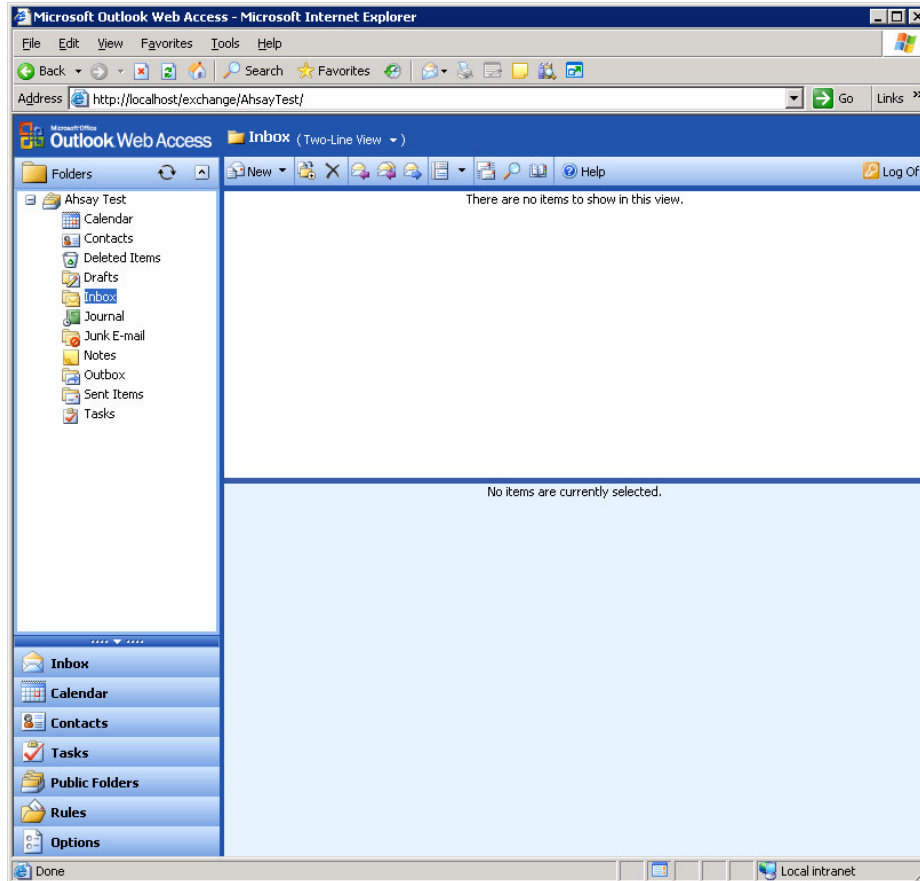

2.4 Restore Emails

Assume that the emails in my inbox are accidentally deleted and I want to restore the emails previously backed up.

- a) Firstly, I moved the original email to my Junk E-mail folder to simulate accidentally deleted an important email from my inbox.

b) From the Restore List, I located the email I want to restore.

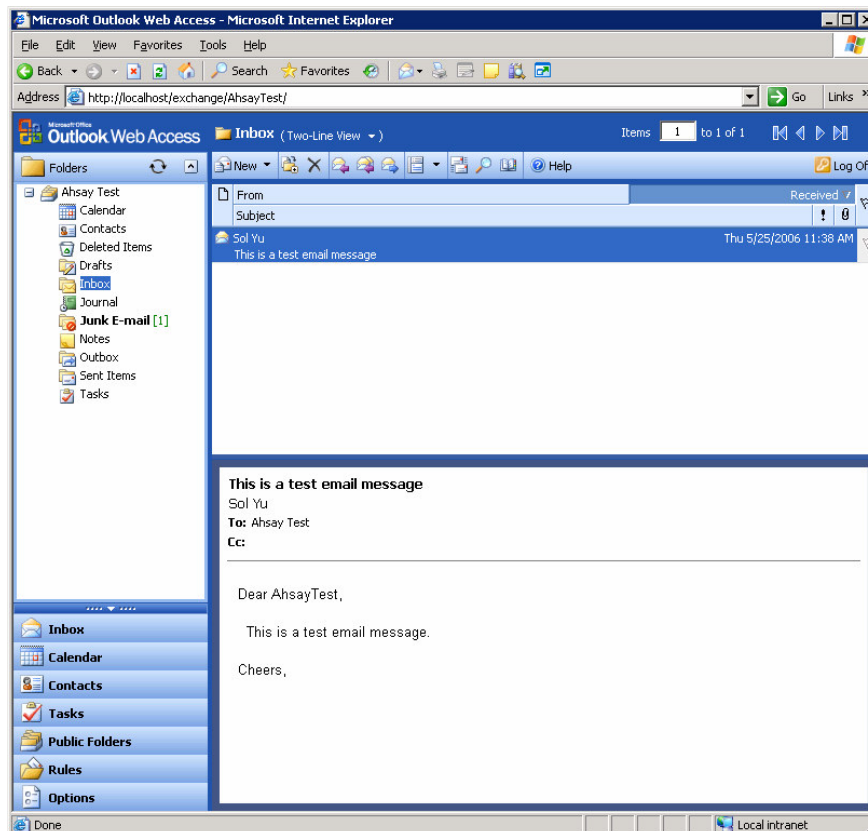

c) Click [Restore Files]. For security reasons, the email will only be restored to its original location.

d) Email restored to my “Inbox”

3 Work In Progress

This current version only backup and restore individual emails from the exchange server. However, we are committed to enhance the “MS Exchange Mail Level Backup Agent” to provide the following features and should be available soon.

- ◆ Calendar Information
- ◆ Contact Information
- ◆ Tasks
- ◆ Notes
- ◆ Journals
- ◆ Public Folders and Files
